| Raxil <sup>®</sup> Pro Shield                      | Bayer                    | 48 Hours                         | 365 Days*                          |
| Straxan <sup>™</sup>                               | Corteva                  | 48 Hours                         | 90 Days*                           |
| Teraxxa <sup>®</sup> F4                            | BASF                     | 48 Hours                         | 365 Days*                          |
| Vibrance <sup>®</sup> Quattro                      | Syngenta                 | 48 Hours                         | 365 Days*                          |
| VitaFlo <sup>®</sup> SP                            | IPCO                     | 48 Hours                         | 60 Days*                           |

\*These timepoints represent the current minimum survivability of LALRISE START SC. Testing will continue for up to 24 months; consult your local Lallemand Plant Care Rep for more information.

<sup>1</sup>Tank mix compatibilities were tested at room temperature (22-25°C/72-77°F). <sup>2</sup>On-seed survivability is based on seed stored at 4°C (39.2°F). Products were mixed in slurry (without water) following respective label recommendations.
